KEY RISKS

What are the key risks associated with this fund?

General risks

➢ **Capital and returns not guaranteed**

The fund is exposed to a variety of risks by nature of the investments it is engaged in. As such, the fund does not provide a guarantee on capital contributed nor does it guarantee a fixed rate return.

➢ **Inflation risk**

Inflation risk refers to the loss in purchasing power of your investment returns due to a general increase in prices of goods and services. If the returns from your investments do not keep pace with the inflation rate, the real rate of returns from these investments will be impacted.

➢ **Legal and regulatory risk**

Changes in laws and regulations in the countries that the fund is invested in may impact the investments of the fund. Apart from this, there is also the risk that changes in laws/regulations/guidelines relating to PRS could affect your account or accessibility to the monies in the account.

➢ **Risks associated with the default option**

Under the default option, your contribution will be automatically switched (regardless of NAV movement trends) into the relevant core fund upon reaching the prescribed age. At the point of switching, the unit price may be lower than the price you paid when you contributed into the fund, and as such, you will incur losses.

Specific risks

➢ **Market risk**

Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the fund's NAV.

What are the key risks associated with this fund? (cont'd)

➢ **Specific security risk**

Prices of a particular security may fluctuate in response to the circumstances affecting individual companies. As such, adverse price movements of a particular security invested by the fund may adversely affect the fund's NAV and unit price.

➢ **Liquidity risk**

Liquidity risk refers to the ease of liquidating an asset depending on the asset's volume traded in the market. If the fund holds assets that are illiquid, or are difficult to dispose of, the value of the fund will be negatively affected when it has to sell such assets at unfavourable prices.

➢ **Risk associated with investments in warrants**

The market price of warrants held by the fund will depend on the current market price of the underlying security, the exercise price of the warrants and the time to expiration of the warrants. Such investments may experience time decay, and the erosion of value accelerates as the warrant approaches its expiry date. Any adverse movements in the market price of the warrants may impact the fund's NAV and unit price.

You are advised to read the disclosure document and understand the risks involved and, if necessary, consult your professional adviser before making contributions.
