

Equity Markets Traded Mixed amid the Middle East Conflict

- **What happened:** The U.S. equity markets eased in 1Q 2026 amid near-term tariff uncertainties following the U.S. Supreme Court's ruling against the imposition of tariffs under the International Emergency Economic Powers Act, while global crude oil prices increased significantly in March 2026 following the recent Iran conflict.
- Regional equity markets traded mixed in 1Q 2026, with the South Korea and Taiwan markets rising on gains in selected semiconductor stocks amid robust demand for advanced artificial intelligence (AI)-related semiconductor chips, while the Chinese markets fell after China set a lower economic growth target for 2026.
- The ASEAN equity markets, as proxied by the FTSE/ASEAN 40 Index, traded higher in 1Q 2026, led by gains in the Thailand and Singapore markets, which offset declines in the Indonesia and Vietnam markets. On the local front, the FBM KLCI rose slightly in 1Q 2026 amid a firmer Ringgit and inflows of foreign funds in the first 2 months of the year.
- **What's next:** Global growth in 2026 is poised to be supported by steady consumption and increasing investments in AI and digital infrastructure. However, a protracted Middle East conflict and disruptions in the Strait of Hormuz could pose economic headwinds.
- Policymakers remain vigilant against cost-push inflation and are prepared to deploy targeted fiscal subsidies and increase liquidity to support domestic economies should energy prices remain elevated. Investors will continue to monitor the impact of geopolitical developments, U.S. trade policies, as well as the resulting effects of energy costs on global inflation and interest rates.
- Equity investors are advised to adopt a long-term investment horizon and practise Ringgit-unit cost averaging. This strategy helps to navigate near-term market volatility and positions portfolios to potentially benefit from a market rebound once regional tensions subside.

Outlook

Malaysia

Malaysia's Real GDP Growth

Source: Department of Statistics Malaysia, * BNM

- In its latest annual report, BNM projects Malaysia's real gross domestic product (GDP) growth for 2026 to range between 4.0% and 5.0% (2025: 5.2%), underpinned by domestic consumption and investment activities.
- Meanwhile, the central bank expects Malaysia's inflation rate to range between 1.5% and 2.5% in 2026.

Malaysia's Fiscal Oil Revenue*

*Includes petroleum income tax, royalties and PETRONAS dividends
Source: BNM

- In 2025, Malaysia's oil-related revenue amounted to RM55.5 billion, accounting for 16.5% of total government revenue, with crude oil prices averaging US\$68 per barrel for the year.
- The potential increase in oil-related revenue from higher crude oil prices could cushion the rise in the fuel subsidy bill. The Malaysian government stands to gain an average of RM300 million in revenue for every US\$1 increase in oil price.

- Malaysia's targeted fuel subsidies and cash handouts could partly help mitigate the pass-through of higher global crude oil prices to domestic inflation and cost of living.

Regional

China's Real GDP Growth

Source: Bloomberg * NPC Forecast

- During the National People's Congress (NPC) meeting in March 2026, the Chinese government set a real GDP growth target of 4.5% to 5.0% for 2026 (2025: 5.0%).

Global Semiconductor Sales

Source: Bloomberg

- Global semiconductor sales rose by 61.8% to US\$88.8 billion in February 2026, with increased chip sales in the Asia Pacific and Americas regions.

- Looking ahead, China's economic momentum will depend on the effectiveness of policy measures aimed at stimulating domestic consumer demand and accelerating investments in emerging technologies.
- South Korea and Taiwan are beneficiaries of the global surge in demand for advanced semiconductor chips that are essential to high-performance computing and AI-related infrastructure.

Outlook

ASEAN

Selected ASEAN Countries' Real GDP Growth Forecast

Source: Bloomberg

Selected ASEAN Countries' Fiscal Budget/GDP

Source: Bloomberg

- Most ASEAN countries have moderate fiscal deficits as a percentage of their GDP, with Singapore recording a budget surplus in 2025.

- Selected ASEAN nations have some policy space to implement targeted stimulus measures to counter the impact of potentially softer economic growth amid higher crude oil prices.

Lipper Leaders:

Total Return

Lipper Ratings for Total Return reflect funds' historical total return performance relative to peers.

Consistent Return

Lipper Ratings for Consistent Return reflect funds' historical returns, adjusted for volatility, relative to peers.

Preservation

Lipper Ratings for Preservation reflect funds' historical loss avoidance relative to other funds within the same asset class. Scores for Preservation are computed from three broad asset classes — equity funds, mixed-equity funds, and fixed-income (bond) funds.

The Lipper Ratings are subject to change every month and are based on an equal-weighted average of percentile ranks for the Total Return, Consistent Return and Preservation metrics over three-, five-, and ten-year periods (if applicable). The highest 20% of funds in each peer group are named Lipper Leaders or a score of 5, the next 20% receive a score of 4, the middle 20% are scored 3, the next 20% are scored 2, and the lowest 20% are scored 1.

Lipper Leaders (overall) - All Ratings as of 31 March 2026 - Ratings for Total Return reflect funds' historical total return performance relative to peers. Lipper Ratings for Consistent Return reflect funds' historical risk-adjusted returns relative to peers. Lipper Ratings for Preservation are relative, rather than absolute. Lipper Leader ratings DO NOT take into account the effects of sales charges. Ratings are based on an equal-weighted average of percentile ranks for each measure over overall period.

Lipper Fund Volatility

The Volatility Factor (VF) means there is a possibility for the fund in generating an upside return or downside return around this VF. The Volatility Class (VC) is assigned by Lipper based on quintile ranks of the VF for qualified funds. The VF is subject to monthly revisions and the VC is revised every six months or other intervals as advised by FIMM. The volatility banding for the "Very Low", "Low", "Moderate", "High" and "Very High" VCs as at 28 February 2026 are $0.000 \leq VF \leq 4.245$, $4.245 < VF \leq 7.705$, $7.705 < VF \leq 10.245$, $10.245 < VF \leq 13.525$ and VF more than 13.525 respectively. For this period to 30 June 2026, the VCs for the funds are based on the VFs of the respective funds as at 28 February 2026. The fund's portfolio may have changed since this date and there is no guarantee that the fund will continue to have the same VF or VC in the future. Presently, only funds launched in the market for at least 36 months will display the VF and its VC.
